Launch newsletter (example)

cajabox classifies files by their names.

The name is split into terms by hyphen (-), underscore (_) or space.
Each term is looked up in the index (Edit index): news, insta, promo...
Synonyms count as the term: newsletter = news, instagram = insta.

Date of use in the name: YYMMDD (241129 = 2024-11-29) or YYMM (2412 = 2024-12).
Without a date in the name, the file's modification date is used.

These are example files (.example before the extension).
When you no longer need them, delete the cajabox-examples folder
and remove the example folders under Folders > Edit.
